Project ID	JEP-41170-2006
Project Type	CARDS 2006 Curriculum Development
Target Country	1244
Title	Curriculum Development Master Study Mechatronics Management in Kosovo
Objective	Kosovo (UNMIK) is continuing its economic and industrial reform and transition process, for which it receives support from the EU. In particular the industry must be restructured and modernized for which engineers with state of the art knowledge, including Mechatronics and other innovative technologies, are required. In 2004 the European Commission had approved a proposal for the implementation of a bachelors degree curriculum in Mechatronics which had been submitted by the same consortium. This project has been implemented as per 30. November 2006 and first term of studies has commenced, which means that the first students in Mechatronics will graduate as bachelors in 2009. It is now a logical consideration that UBT / IEME should be able to offer the possibility for master's degree studies as a continuation. It is very likely that also graduates from general mechanical engineering and information technology as well as engineers from profession will participate in this programme. The curriculum will be in conformity with the Bologna Process and with ECTS-regulation (120 scores). The new opportunity of obtaining a Masters Degree in Mechatronics Management in Prishtina will render a significant contribution to Human Resource Management and national economic progress with a very high potential of sustainability.
Subject area	T523 - Electrical and Electronic Engineering

Title	Numerical and Experimental Engineering Dynamics
Objective	<p>The project 'Numerical and Experimental Engineering Dynamics' (NEED) will develop new courses for master programmes that will provide necessary upgrade in engineering curricula at Croatian universities. The upgrade is needed to follow, at the high-educational university level, the development and implementation of new technologies.</p> <p>The NEED courses will focus on engineering multidomain methodologies, combining numerical and experimental procedures in different fields of engineering dynamics. Beside delivering expertise for solving problems in particular domains, the courses will focus on selected problems in multi-physics, combining methodologies from different areas of engineering dynamics (fluids, solids) to create environment for solving coupled problems that are often crucial for understanding sophisticated state-of-the-art engineering systems.</p> <p>The NEED courses will follow-up the basic courses that are already offered at the universities and they will be especially selected to fit in the existing master engineering programmes at University of Zagreb and University of Split, unifying educational practise at Croatian universities and upgrading the curricula with the aim of raising it to the European standards. The courses will be offered to graduate students at both universities as well as to industrial engineers, disseminating know-how and engineering best practice to industrial subjects in different areas of Croatian economy (aircraft maintenance industry, maintenance of nuclear technology, power industry, shipbuilding etc.)</p>

Title	European quality standards in limnology education
Objective	<p>There are a number of ongoing activities in the EC concerning higher education, research and environmental monitoring for improvement ecological qualities of Europe's ecosystems. This projects integrates these approaches focusing on fieldsu of limnology and targeting development of the related competences in Croatia. The project is linked to</p> <p>1) Enhancing basic and applied limnological knowledge in the Partner Country with special attention to) the EC-Water Framework Directive (WFD).</p> <p>2) This goal is aimed to reach through the 3-level principle of the Bologna process, namely it</p> <ul style="list-style-type: none"> - provides overall view on the WFD with some practical skills that can be appropriate at BSc level (can also be used in life-long learning courses); - introduces the students to theoretical problems that may help to plan target research to understand and implement better the WFD that concerns MSc studies and - improves the competitiveness of the target county in composing project proposals, writing scientific papers at international level and disseminate the gained knowledge to the public and the decision makers. This competence is mostly relevant at PhD level. <p>To fulfil the above objectives a consortium of 7 universities (from 6 EC and one non-EC countries) was collected and knowlegde of some external experts from the central EC institutions, universities not involved in the consortium, governmental and private companies were also involved.</p>

Target Country	RS
Title	Interdisciplinary Engineering Education Establishment
Objective	<p>The labour market in the modern economy requires graduates who are both highly competent across a range of technical disciplines and who are also trained in the relevant aspects of business management, economics and law.</p> <p>The overall aim of the project is to establish the required infrastructure to support interdisciplinary education on a sustainable basis. This will consist of the following</p> <ul style="list-style-type: none"> o Curriculum development that will put emphasis on interdisciplinary education and training. This will be aimed at breaking down the traditional barriers between technical disciplines including Mechanical Engineering, Electrical and Information and Communication Technologies (ICT), while at the same time providing a solid foundation in areas of Business Management and Economics for all technical specialists. o Development of courses that will adopt modern teaching methods and tools. o Provision of exemplary laboratory facilities designed to support both undergraduate and postgraduate education which will aim to address the excessive traditional bias towards purely theoretical form of teaching at Universities in Serbia. Such facilities will also be available to support relevant research activities in relation to PhD study programmes. o Development of educational material based on modern e-learning methods and tools. These will be designed to complement and enhance the new laboratory facilities and, importantly, to provide an infrastructure that will support closer integration between various departments, faculties and institutions. It is also envisaged that such tools will enable a significant amount of self-study and support continuing education courses (lifelong learning) at different academic and skill levels. o Development of quality control methods and procedures based on best practices, which will be designed to maintain educational standards and ensure their further improvement on a sustainable basis. <p>The focus of the project will be Mechatronics education as an interdisciplinary subject with strong relevance to all branches of engineering and science. Within this framework, the aim is to provide good laboratory support for the core of the new technical curriculum, which will consist of interdisciplinary courses in ICT, mechanical and electrical engineering. The new facilities will be established in the Electrical Engineering Faculty at the University of Belgrade and in the Mechanical Engineering Faculty at the University of Kragujevac, and they will be made available to other departments and institutions to support their educational activities. The modular study programmes will be created in accordance with Bologna Declaration including undergraduate and postgraduate study, in order to produce graduates who combine a sound knowledge of engineering with an understanding of the principles of management and economics. Faculties of Economics and Law in Belgrade and Kragujevac will be included in project realization, too. Also, the aims are introduction of new teaching methods and long-term inter-university collaboration based on student mobility and establishing beneficiary universities as an example of good practice.</p>
