EU International Strategy for Research and Innovation

Science knows no boundaries: the EU will strengthen its cooperation in research and innovation across the globe, with Horizon 2020 – its funding programme for research and innovation from 2014 – playing a key role.

- **Global challenges**

Addressing global challenges such as climate change and food security needs cooperation across frontiers to build the teams and develop the knowledge, technologies and innovation to tackle them.

- **International cooperation**

Knowledge shared is knowledge gained – so making the EU attractive to scientists and working with international partners will increase the impact of science worldwide. Major research infrastructures also increasingly require international cooperation.

- **Innovation opportunities**

Innovation will deliver growth and jobs and is at the heart of Horizon 2020. Teaming up with partners worldwide will lead to breakthroughs and help open markets for new products and services..
